

# “问学华中大” — 中国绿色经济与国际合作项目期待您的加入

Welcome to join us! "Discover at HUST" - China's Low-Carbon Economy and International Cooperation Program

## Introduction to the School of Economics, HUST 学院简介

The School of Economics at Huazhong University of Science and Technology (HUST) is a leading economics institution in China. Founded by Peikang Chang, the father of Development Economics in China, the school has a strong reputation for excellence in economics education, research, and public service. Committed to training economists for international and cutting-edge academic research, the school has produced numerous distinguished economists, experts, and leaders in academia, business, and politics.

With over 70 full-time faculty members conducting world-class research in nearly all areas of economics—including economic theory, econometrics, macroeconomics, international trade, industrial organization, development economics, labor economics, health economics, and environmental economics—the school consistently publishes in top-tier academic journals. Senior faculty members often serve on government commissions addressing critical issues like housing, regional development, and poverty.

Since 2000, the School of Economics has successfully cultivated 345 international students, including 66 bachelor's, 167 master's, and 72 doctoral graduates.
